Group coursework 3

- Please submit your coursework on Moodle **by Midday on 12/03**.

- Please upload your text answers to Questions 1 in **one pdf file**.

- Please also upload one R script for Question 1.

- Make sure that you have included **sufficient** comments in the codes to make them **readable** by other people. There should be **no error messages** shown when I run your R scripts. You can assume that I have installed all required packages.

Question 1 [**15 marks**] Design a shiny app that can visualise decision tree and/or random forest. You can use any dataset that you like. Please also write few paragraphs to briefly explain how you design the app and how it works (no more than 400 words). I will invite groups who create nice apps to present in week 11.
